Quadratic Transformations and
Inequalities

9/27/17

Use substitution to verify $(5-2i)$ is a solution to the equation $x^2 + 29 = 10x$

$$(5-2i)^2 + 29 \stackrel{?}{=} 10(5-2i)$$

$$(5-2i)(5-2i) + 29 \stackrel{?}{=} 50 - 20i$$

$$\textcircled{25} - \underline{10i} - \underline{10i} + \textcircled{4i^2} + \textcircled{29} \stackrel{?}{=} 50 - 20i$$

-4

$$50 - 20i = 50 - 20i$$

Warm Up:

QUICKLY determine the number and type of solutions for this equation.

$$2x^2 - 12x + 26 = 0$$

Note: You should NOT find the solutions!

Discriminant: $b^2 - 4ac$

$$(-12)^2 - 4(2)(26) < 0$$

so 2 complex sol.

Ex#1: Graph $y < 2x^2 - 12x + 26$

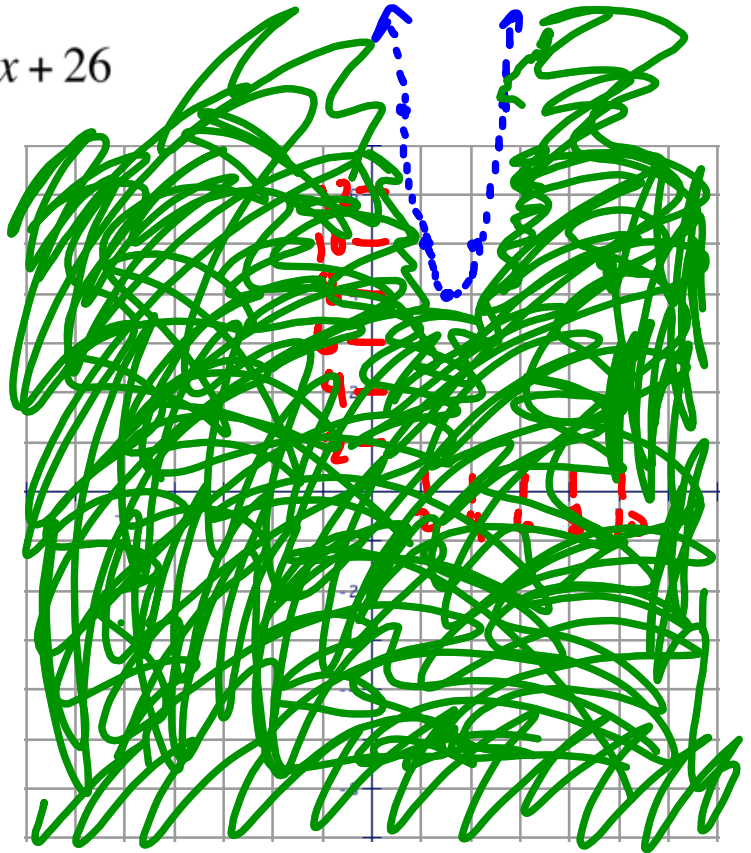

Vertex:

$$x = \frac{12}{2(2)}$$

$$x = 3 \quad (3, 8)$$

$$2(3)^2 - 12(3) + 26$$

$$18 - 36 + 26 = 8$$

Ex#2: Solve $x^2 + 2x - 8 \geq 0$

$$x^2 + 2x - 8 = 0$$

$$(x+4)(x-2) = 0$$

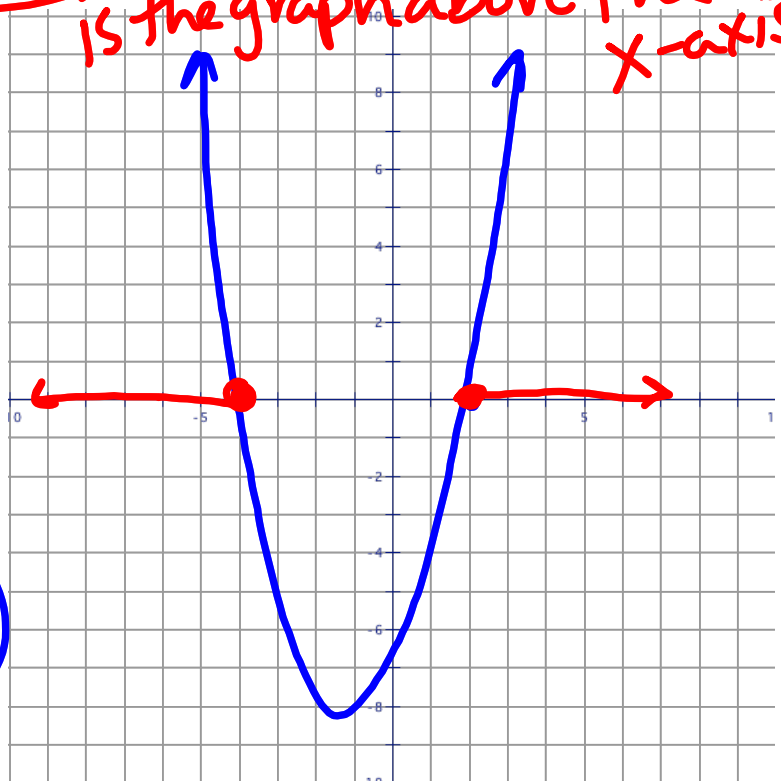

$$x = -4 \quad x = 2$$

$$x \in (-\infty, -4] \cup [2, \infty)$$

$$\{x \mid x \in (-\infty, -4] \cup [2, \infty)\}$$

For what x -values is the graph above the x -axis?

Ex#3: Solve $2x^2 + x < 15$

$$\underline{2x^2 + x - 15 < 0}$$

$$2x^2 + x - 15 = 0$$

$$(2x - 5)(x + 3) = 0$$

$$x = 5/2 \quad x = -3$$

$$x \in (-3, 5/2)$$

Ex#4: Solve $3x^2 + 5 > 6x$

$$\underline{3x^2 - 6x + 5 > 0}$$

$$3x^2 - 6x + 5 = 0$$

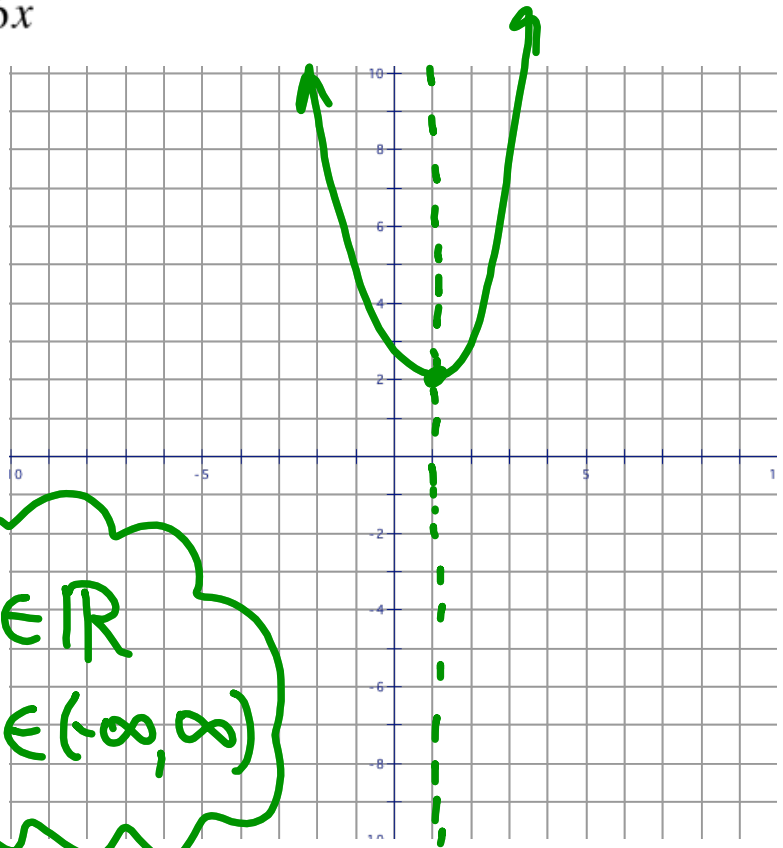

$$(-6)^2 - 4(3)(5)$$

$$36 - 60$$

2 complex sol.

No x-int.

$x \in \mathbb{R}$
 $x \in (-\infty, \infty)$
